

The "Mistelås Socken Ekonomisk Förening" has started a project to build a broadband network based on fiber optics in the Mistelås community. A broadband network like this will give access to high quality services such as Internet, television and telephony. As Telia is gradually terminating its fixed telephony services in rural areas like ours and replacing it with mobile solutions, we regard the implementation of a fiber optic network as a strategic development for our community. It will keep our community attractive for current and coming generations to work and live in.

This network will provide companies and citizens in the Mistelås community with the same communications services as in the big cities. It enables citizens to work from home diminishing commuting which benefits the environment. It will give the children a wide-ranging access to education via the Internet. Companies get better infrastructure to develop and extend their business and new type of businesses can emerge creating new job opportunities.

Your personal benefits are that you can enjoy these communications services while you are visiting Sweden. Furthermore your property will become more attractive on the real estate market and will in the future be easier to sell.

We hope you take the opportunity to invest in your property and in the future of the Mistelås community by joining this project and connecting your real estate to the network. On our website [www.misteas.se](http://www.misteas.se) you find more information about the project as well as a contract ("avtal"). On the contract you can fill in the maximum amount you are willing to pay to connect your property to the network. By returning the contract you commit to connect your property to the network. You do not have to make payments immediately. We will first make an assessment if the project is feasible based on the commitments made. We will notify you when the implementation of the network starts.

No doubt you will have many questions. Please not hesitate to contact me. You can reach me by telephone on +46-472-21030 or by email [info@zwaard.net](mailto:info@zwaard.net).

With kind regards,

Danny Zwaard.

**PS If you want to participate in the project, please return the signed contract before the 20<sup>th</sup> of March 2009 to the address below.**
